

## WE'RE NOW SET TO GO DEEPER WITH A NEW RIG

Our New L.C. Moore Drilling Rig

God's Word is full of stories laden with His promises of blessings and prosperity in the land of adversity. So it has been with TRIG. The enemy has tried hard to discourage us. But we have steadfastly trusted the Lord that His Vision's fulfillment is certain. "Then the LORD answered me and said, 'Record the vision and inscribe it on tablets, that the one who reads it may run. For the vision is yet for the appointed time; it hastens toward the goal and it will not fail. Though it tarries, wait for it; for it will certainly come, it will not delay.'" (Habakkuk 2:2-3, NASB)

In the natural, the first time through any new process or procedure generally goes through an initial shake down phase with many challenges. In our case, an air drilling subcontractor for unexplainable reasons left his post, allowing his hammer and bit to reciprocate off the bottom of the hole for an extended period. This caused the formation around the drill hole to vibrate and cave in after reaching a depth of 1730 feet. The error ultimately buried the drilling tools irretrievably at 1540 feet. (We believe we have an insurance claim against this subcontractor for this action and we expect a reimbursement of all of our costs.)

We then hired a directional drilling subcontractor who successfully drilled around the stuck hammer and bit so we could proceed on course with the hole. The bend, however, put an additional drag strain of 45,000 lbs. on our derrick and draw works when tripping out of the hole to change drill bits. This limited our achievable drilling depth short of our initial target.

Late Wednesday afternoon July 22, when we pulled out at 4175 feet to change a drill bit, we made the decision to find a larger drill rig. It was the only way we could continue this 1<sup>st</sup> hole. Today, looking back, we truly believe God worked a miracle of provision on our behalf. Within 12 hours Odie Sanders, our drill superintendent, located a drill rig with 11,000 ft capability that had just come off a job in Colorado and was for sale. By Thursday evening Odie had completed a physical inspection of the rig; it was exactly what we needed. The Lord gave us an incredibly affordable price, and Friday, July 24, we wired the funds for purchase as Odie and crew began loading 12 oversized semi trucks headed for Elko. In the meantime we moved our EMSCO-250 rig off the drill site, clearing the way for the new rig to be set over the existing drill hole.

### RIGS COMPARISON:

- The new rig, left, is a 131 ft. certified L. C. Moore derrick substructure and oil well "66" draw works with 1000 horsepower motor.
- The small rig, right, is a 91 foot EMSCO-250.
- The EMSCO-250 can lift 180,000 pounds maximum; the L. C. Moore can lift 300,000 pounds maximum.
- The EMSCO-250 has a 400 horsepower motor; the L. C. Moore has 1000 horsepower.

There will be many advantages in efficiencies and rate of depth penetration with the L. C. Moore. This is significant in our selection of the next drilling locations.

On July 26 we also received of our Truck-mounted Rig 11. This drill rig was purchased under a 90 day option, shortly after we discovered the shallow targets that are potential in "Bregan's Prayer." We are now working on land leasing acquisitions in an accelerated mode so we will be in position to begin drilling those shallow targets before yearend.

We are continuing our "tight hole" strategy. However, we are very encouraged that the CSARI technology we've employed seems to have correctly identified two water zones, three barren zones devoid of hydrocarbons, and two carboniferous zones. The first Isaiah 45:3 16-1 drill hole is in an area previously undrilled. We are in a learning phase relating to true calibration of CSARI data. This data can vary from 28 ft./second to 60 ft./second. The current data indicates our calibration is going to be at the higher end. Therefore we possibly may have to drill to a depth of 6000 ft. to fully test our initial target. Our new rig should be able to handle this easily.

The new rig set up and ready to go at Isaiah 45:3 16-1 drilling site.

From the day that we decided to search for a new drilling rig, we were able to inspect, purchase, begin loading that rig within 2 days, and by Sunday, July 26<sup>th</sup> the rig began arriving on the drill site. The rig is now in place with the draw works lifted up and setting over the drill hole. We completed the required inspection on our BOP (Blow Out Preventer) at 3:00AM August 1, 2009. By 4:00AM we resumed drilling. Since the EMSCO-250 rig was so much smaller, we had to drill a new mouse-hole and rat-hole with our new rig. At this writing, we are picking up new directional tools and preparing to trip back in the hole and drill ahead. To our Lord be given the Glory. Larry McGary, Chief Executive Officer

Cautionary Statement relevant to Forward – Looking Information for the Purpose of “Safe Harbor” Provision of the Private Securities Litigation Reform Act of 1995.

- This update letter contains forward-looking statements relating to The Rock Investment Group, Inc. operations that are based on management’s current expectations, estimates and projections about its operations. Statements made in the course of this letter that are not historical facts are forward-looking statements. Words such as “anticipates,” “expect,” “intends,” “estimated,” “guidance,” “recommends,” and future projections shown in charts and tables and similar presentations and expressions are intended to identify such forward-looking statements. These statements are not guarantees of future performance and are subject to risks, uncertainties and other factors, some of which are beyond our control and are difficult to predict. Therefore, actual outcomes and results may differ materially from what is expressed or forecasted in such forward-looking statements. The reader should not place undue reliance on these forward-looking statements, which speak only as of the date of this letter. Unless legally required, The Rock Investment Group, Inc. undertakes no obligation to update publicly any forward-looking statements included in this letter, whether as a result of new information, future events or otherwise.
- Among other factors that could cause actual results to differ materially from those in the forward-looking statements are crude oil and natural gas prices; the competitiveness of alternate energy sources or product substitutes; technological developments; delays in planned or expected drilling and development programs; the future infrastructure development; environmental factors not currently foreseen, and political developments impacting our areas of interest. Unpredictable or unknown factors not discussed herein also could have material adverse effects on forward-looking statements.
